

DENSI-PROOF™

Lanskey Constructions™ stay ahead of the opposition with industry best cure regime

THE NAME SAYS IT ALL

At Time of Pour Carparks

Densi-Proof™ as Industry Best Cure and Contamination Protection

Paul Mickus Site Manager for Lansky Constructions has insisted on Densi-Proof as a cure for all his prestige projects. "The only recent project that the client refused to use Densi-Proof resulted in concrete that cracked and dusted, it was a petrol station fore court so there is now an easy path for spilled fuel and other contaminants to start early degradation." Paul told us. "Customers like Porsche Brighton expect the best products and practice available and that's why I insisted on the recent renovations to the showroom and work room areas having Densi-Proof at the time of pour. It gave the client protection from oil ingress, plastic cracking plus providing a hard dust free surface."

These are just two projects of many used by Lansky Constructions for permanent protection against contamination ingress into the concrete sub floor. Once Densi-Proof™ is applied body fluids, acids, chemicals or any other contaminates will not penetrate into the capillaries or voids of the concrete matrix. This halts early corrosion or break down of the concrete and ensures a microbe free concrete interior that will not harbour disease or allow foul odours.

The carparks structured surface has a stronger surface resistance to abrasion from wear after the Densi-Proof application ensuring a longer life as a low slip

Clayton McDonalds completed carpark Densi-Proof™ for a moisture barrier, body fluid protection, surface hardener and cure & seal.

surface. Densi-Proof™ will improve and preserve any concrete. Application is quick, clean, safe and environmentally neutral. There is minimum disruption to other trades. On new concrete Densi-Proof™ is industry best cure and seal (equal or better than water ponding), and concrete preservation treatment. Densi-Proof™ is a once only permanent application. It inhibits oils, urine (and other body fluids), water, acids and chemicals.

Terry Lucas and Paul Mickus, Site Manager for Lansky Constructions at North Road McDonalds car park only hours after placement by the concreters, watching the commencement of the Densi-Proof application.
