THE NAME SAYS IT ALL

Protect Crete products have recently been tested for VOC compliance under the specification of the **Green Building Council of Australia** and pass easily with under 1 gram per litre meeting the criteria of **Green Star**. Earlier testing by Melbourne Laboratory **Environmental Consulting Pty Ltd** gave values of less than one 500th of a gram per litre, virtually none. This brings together and completely reinforces **Polyflor's** commitment to providing safe and sustainable building and flooring solutions. Protect Crete's Moisture Barrier is part of the Polyflor **One System Guaranteed Solution** which has all components, **Kiesel** engineered underlays, adhesives and vinyls, Green Star compliant. Polyflor's National Products Manager **Aaron Martin** said "This one stop complete integrated system professionally and completely backed up by Polyflor experienced personnel is proving very popular because it gives peace of mind and confidence to any customer, specifier or architect."

Terry Lucas points out "Our role as responsible manufacturers includes environmental and planning sustainability. Protect Crete manufactures in Australia under licence and by doing this we minimize the impact of transporting bulk product from half way around the world. Buying locally ensures every one is contributing to lowering our environmental impact. That is why we are proud supporters and partners of Australian Made Campaign"

Aaron Martin, National Product Manager of Polyflor being given the **Cetec VOC compliance certificate** by **Terry Lucas of Protect Crete**. The presentation was made during a training by Aaron on a site that includes the entire **Polyflor One System Guaranteed Solution**. This very interesting project will be featured in the December issue of **Floors**.
